

Customized Control Panel Location.

Standard CustomPak Configuration (Top mount controls shown)

Side Mount Control Panel CustomPak (vertical configuration shown)

Our standard Gramatech Custompak unit allows adjustable sealing heights starting at 37 inches (940 mm) from the ground to a maximum 52 inches (1320 mm.) Because of its design, it is highly configurable and customizable. The control module can be placed in several locations that allow for a higher seal head location. Above are just two examples of control module placement. Note the different maximum seal height of each.

If your application requires the seal jaws to be placed higher than our standard unit allows, e.g., so that a conveyor is able to fit under the sealer, we can do that. Please see the picture above of a unit that was produced for a customer so that they are able to increase the maximum sealing height to 57 inches (1450 mm.) **Please call us for your customized packaging solution.**
